RICHARD MURRAY HOSPITAL JOINT BOARD.

THIRTEENTH

ANNUAL REPORT

OF THE

RICHARD MURRAY HOSPITAL, BLACKHILL, CO., DURHAM,

FOR THE YEAR

1935.

RICHARD MURRAY HOSPITAL JOINT BOARD.

THIRTEENTH

Annual Report

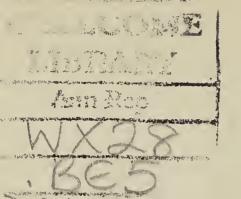

ON THE WORK

OF THE

RICHARD MURRAY HOSPITAL, BLACKHILL, CO., DURHAM,

FOR THE YEAR

1935.

MEMBERS OF THE BOARD.

Chairman — GEO. T. HYDEN, M.B.E., J.P. Vice-Chairman — HEDLEY MASON, J.P.

Messrs. S. CARRUTHERS, J. DAVISON, A. ELLIOT, W. L. GIBSON, GEO. T. HYDEN, M. KEENLEYSIDE, S. LESLIE, J. J. LUMLEY, J. G. MURRAY, T. H. MURRAY and J. ROXBY SURTEES, representing the Hospital Trustees and Governors; and County Aldermen W. BROWN, G. LUKE and HEDLEY MASON; County Councillors T. BENFOLD, S. LAWTHER, Mrs. MASON, R. SHOTTON, J. T. STERLING, A. TUCKER and J. WALTON; and also Miss HELEN PEILE, representing the County Council of Durham.

STAFF.

Resident Medical Officer:

J. FORREST HAMILTON, M.D., M.B., B.Ch., M.R. San. I.

Anaesthetist: G. EWEN, M.B., Ch.B.

Matron: A. E. COMPTON, D.N., S.R.N., S.C.M.

Honorary Masseuse: JOAN SIMON, C.S.M.M.G., B.P.A.

Honorary Treasurer: J. E. CLARKSON.

Secretary: T. W. ADDISON.

TO THE CHAIRMAN AND MEMBERS, RICHARD MURRAY HOSPITAL JOINT BOARD.

I have pleasure in presenting the Thirteenth Annual Report on the work of the Hospital for the year ended 31st December, 1935.

Several changes occurred in the personnel of the Joint Board during the year. Consequent upon his election as a Governor for 1935 Mr. W. L. Gibson took the place of Mr. J. Smith on the Joint Board. Councillor S. Lawther was elected by the Council Councillor I the vacancy caused by the resignation of Councillor J. Parker, M.A., while Councillor R. Shotton succeeded to the vacancy resulting from Councillor J. Kelly's resignation.

The official staff remained unchanged during the year under review.

From a perusal of the report of the Medical Officer it will be seen that the work of the Hospital has been fairly well maintained during the year.

The total number of admissions dropped from 977 in the previous year to 922 last year, the principal reduction occurring in the maternity wards, viz., from 366 to 317. The admissions to the surgical wards numbered 605 as compared with 611 during 1934, and the average duration of stay per patient was 13.55 days as against 14.53 days for the previous year. The average stay per patient in the maternity wards was 14.65 days, while for the previous year the figure was 14.31 days.

The number of operations performed during the year declined by 80, the figure being 926 as compared with 1,006 in 1934.

Attention is specially drawn to the remarks of the Medical Officer in his report regarding the use of the ante-natal clinic by expectant mothers in which he states that "it is to be regretted that more patients do not avail themselves of this aid to safe maternity." There were admitted 180 ante-natal cases which is slightly less than the number during 1934, though a considerable increase compared with 1933 when 122 ante-natal cases were treated.

Of the 22 deaths which occurred during the year, and which represents a mortality rate of 2.3 per cent. of the total admissions, only one occurred in the maternity wards. The corresponding rate for the previous year was 1.8 per cent. of admissions.

The work of the Out-Platient Department has been well maintained throughout the year, the number of attendances (3,360) being fewer by 227 than those for the previous year. The number of new cases (917), however, showed a slight increase on last year's figure.

It is gratifying to find that the services of Miss Joan Simon as Honorary Masseuse are still being appreciated, for the number of patients treated (144) exceeded the cases dealt with during the preceding year by 25.

Several meetings of the North Eastern Regional Committee of the British Hospitals Association have been held during the year, and were attended by representatives of the Joint Board.

The Board is again greatly indebted to the Special Appeals and Auxiliary Committees for their untiring efforts on behalf of the Hospital during the past year. The amount collected by the Special Appeals Committee realised the handsome sum of \pounds 227 128. 11d. The Walton Bowl Competition again benefited the funds of the Hospital to the extent of \pounds 40. Also, the generous support of the Hospital by many organisations and by individuals has been continued throughout another year.

Mention must also be made here of the excellent services rendered once more to the Hospital by the Linen League.

To all who have assisted in any way during the year the Joint Board offer their thanks.

I append hereto the reports of the Medical Officer, the Matron, and the Honorary Treasurer's Statement of Receipts and Payments.

Finally, I wish to thank the members of the Joint Board, the Medical Officer, the Matron, the Honorary Treasurer, and other members of the staff for their kind assistance during the year.

T. W. ADDISON, Secretary.

Shire Hall, Durham.
1st February, 1936.

Annual Report of Medical Officer.

I beg to submit, for the year 1935, the Thirteenth Annual Report on the work of the Hospital. This is the Fourth Annual Report that I have had the honour of presenting to you.

GENERAL OBSERVATIONS.—The continuance of the greatly increased work shows that the Hospital continues to enjoy the confidence of the General Medical Practitioners and of the general public of the district. The Hospital continues to meet almost the entire surgical need of the population; it accepts surgical cases without selection and the work is as "representative" and varied as surgical work can be, but I feel I ought to repeat my remarks in the last annual report-there is great need for increase in the bed accommodation and for extension of our activities; there are many medical cases and surgical cases of a semi-acute or chronic nature which would be benefited by hospital treatment which at present cannot be admitted owing to the limited accommodation. The Richard Murray Hospital is excellently equipped and ideally situated, and I should like to think that before long it would be in a position to meet the entire need for hospital treatment of the large population surrounding it.

The Hospital is well equipped on up-to-date lines and the Fowler beds continue to add much to the efficiency of the work. In design and structure the Operation Theatre is one of the best I have seen and the recent additions to the furnishings have made it efficient in every way. A shadowless lamp would be a beneficial addition.

The drive and paths around the Hospital, on which I commented in my last report, are at the time of writing in the process of being re-surfaced.

STATISTICS.—The following table shows the very great expansion in the work of the Hospital during the last four years; during the year of report the work has been well maintained:—

	Average for years:— . 1923, 1924-1926.1927-1929,1930								
YEAR:				and 1931.		1933.	1934.	1935.	
Admissions:		441	582	830	1081	1088	977	922	
Surgical Wards	• •	254	315	527	749	736	611	605

TREATMENTS IN MASSAGE DEF	т			_		656	1424	1221	

MORTALITY.—During the year 22 deaths occurred in the Hospital; this gives the very low death-rate of 2.3 per cent. of admissions. The low mortality rate continues to be a pleasing feature of the annual reports, especially when it is remembered that there is no selection of cases.

WARD STATE.—The accompanying table shows the state of the wards during the period of report:—

Wards.	Admitted	Discharged	Patient-days.	Average daily number.
Surgical	605 317	614 315	$\frac{8321}{614} = 13.55 \text{ days}$ $\frac{614}{4615} = 14.65 \text{ days}$ $\frac{315}{315}$	
Totals	922	929	Average 14·1 days	34.96 patients

SURGICAL WARDS.—605 patients were admitted; 343 males and 262 females; these figures include 285 children under 16 years of age. Of the admissions 8 were medical and the remainder surgical. The average stay in Hospital per patient was 13.55 days—this is a reduction of one day on 1934.

767 operations were performed—of which 160 were major operations, and 607 were minor.

Emergency operations numbered 211. The surgical work of this area has been much lighter during 1935 than for many years past. These figures are a clear indication of the usefulness of the Hospital.

Platients are still being sent by the Public Assistance Committee from the Medomsley Cottage Homes for surgical treatment, and the Tubercalosis Committee continue to send cases for the surgical treatment of tuberculous conditions.

614 patients were discharged—542 cured, 25 relieved, 26 in statu quo and 21 died. Details of the deaths are given in the attached table:—

Ref. No.	Sex	Age.	Admitted.	Died.	Cause of death.
34/488	F	12	13/10/34	15/1/35	Toxæmia; cellulitis and osteomyelitis.
35/71	M	$\frac{12}{62}$	16/2/35	$\frac{10/100}{27/2/35}$	Anorexia; pyloric stenosis-carcinoma.
35/104	M	52	$\frac{2}{3}/35$	4/3/35	Carbuncle, septicæmia, nephritis
35/127	F	68	19/3/35	22/3/35	Empyema and pleuro-pneumonia.
35/130	M	25	23/3/35	28/3/35	Chronic intestinal obstruction—
00/200			,-,-	20,0,00	intussusception.
35/188	M	66	24/4/35	28/4/35	Myocarditis—perforating gastric ulcer.
34/417	M	66	24/8/34	15/5/35	Pleurisy and hypostatic pneumonia.
25,208	F	12	5/5/35	10/5/35	Pyæmia – cellulitis of foot.
35/255	F	56	5/6/35	14/6/35	Toxæmia—empyema of gall bladder.
35/281	F	53	18/6/35	30/6/35	Myocarditis, nephritis, pneumonia—
1				,	acute appendicitis.
35/271	M	63	12/6/35	3/7/35	Herniorrhaphy—toxæmia—acute cellu- litis of abdominal wall.
35/291	M	52	26/6/35	25/7/35	Intestinal obstruction—carcinoma.
35/306	M	50	13/7/35	25/7/35	General peritonitis—perforating gastric
00/000			23,1,31	20/1/00	ulcer.
35/307	F	36	13/7/35	21/7/35	General peritonitis and intestinal obstruction following septic abortion.
35/435	M	12	24/9/35	2/10/35	General peritonitis—perforated ulcer of
00/100					intestine—typhoid (?)
35/449	M	33	28/9/35	25/10/35	Toxæmia—boils and cellulitis.
35/481	M	20	11/10/35	13/10/35	Toxæmia, perirenal abscess, diabetes.
35/192	F	15	25/4/35	5/11/35	Extensive burns—toxic absorption.
31/540	M	$1\frac{1}{4}$	18/11/35	4/12/35	Extensive scalds—toxic absorption.
35/558	M	30	29/11/35	10/12/35	Chronic intestinal obstruction—abscesses
					due to perforation of bowel by pin.
35/598	F	13	20/12/35	23/12/35	Toxæmia—gangrenous appendicitis.
	1	t		,	

MATERNITY WARDS.—Admissions numbered 317, including 180 cases for ante-natal treatment.

Emergency admissions totalled 46—these were referred to the Hospital for the following reasons:—

Albuminuria	2	Eclampsia	3
Threatened abortion	20	"Failed forceps "	2
Ante-partum hæmorrhage.	8	Hyperemesis gravidarum	3
Abnormal presentation	I	Œdema of legs	1
Pyelitis	1		
		conditions	5

The average stay in Hospital per patient was 14.65 days.

and 89 female; there were twins born in 2 cases. Presentations were as follows:—

Vertex—Occipito-anterior	156
Vertex—Occipito-posterior	6
Face	2
Breech	6
Transverse	I

The need for expectant mothers to take full advantage of the facilities offered by the ante-natal clinics is still emphasised by the number of still-births; these numbered 14 or 8.1 per cent. of the births. Many of these could have been avoided by the treatment offered free by these clinics. The causes of the still-births were:—

Prolapsed cord	2	Anencephalic	1
Delayed labour	1	Abnormal presentation	3
"Failed forceps"	2	Prematurity	1
Macerated fœtus	I	Eclampsia	2
Cause unkno	own		

OPERATIONS.—Cæsarean section was performed in 2 cases. In both cases a live birth resulted and the mother made an uninterrupted recovery.

Surgical Induction was resorted to on 8 occasions; forceps were used in 4 cases; version was performed once; craniotomy was required once in a case where the child was already dead; while salpingo-oophorectomy was performed twice for ectopic gestations.

In all 159 operations were performed in the Obstetrical Department; 31 of which were major operations and 128 minor. 79 patients were relieved of 731 septic teeth, and it is believed that this has had and will have a marked influence in reducing the number of septic cases.

TREATMENT was given to 201 patients for the following conditions:—

Albuminuria	17	Hyperemesis gravidarum 12
Debility	т3	Pyelitis
Septic teeth	79	Ectopic gestation 1
Threatened abortion	19	Ante-partum hæmorrhage . 9
Pleurisy	ĭ	High blood-pressure I
Thrombosis	I	Eclampsia 2
Vaginitis	4	Bronchitis
Varicose veins	4	Cardiac debility 7
Puerperal pyrexia	2	Ophthalmia neonatorum 7
Œdema of t	the fo	eet17

The most unfortunate feature of this report is that fuller advantage has not been taken of the facilities offered in the Maternity Department.

One maternal death took place as under:—

Ref. No.	Age.	Admitted.	Died.	Cause of death.
3553	29	23/7/35	28/7/35	Pneumonia following abortion

Infantile deaths numbered 10, as follows:—

Ref. No.	Sex.	Age.	Born.	Died.	Cause of death.
3370 3468 3485 3494 3501 3545 3547 3565 3609	F F M M F F F F F	3 days 24 hours 9 days 27 hours 6 hours 4 days 5 days 14 days 15 mins.	$\begin{array}{c} 28/4/35 \\ 16/5/35 \\ 3/7/35 \\ 20/7/35 \\ 21/7/35 \\ 8/8/35 \\ 26/9/35 \end{array}$	2/1/35 9/4/35 7/5/35 17/5/35 3/7/35 24/7/35 26/7/35 22/8/35 26/9/35	Prematurity—congenital debility. Prematurity and convulsions. Prematurity and marasmus. Prematurity—albuminuria. Cardiac debility. Convulsions and maramus. Congenital debility—prematurity. Antepartum hæmorrhage—white asphyxia. Congenital cardiac disease.

The Labour Theatre is well equipped. During the year the routine administration of chloral and bromide has been continued and has been found of great service for not only has much unnecessary suffering been avoided but there has been a decrease in the number of ruptured perinei and the labours have been more rapid and much easier.

CONSULTATIVE DEPARTMENT FOR OUT-PATIENTS.

—This department is well equipped and has two small rooms very useful for examinations. Many minor operations are performed in the out-patients' theatre. During 1935 the record attendances of last year have been well maintained.

Consultations numbered 3,360; 917 patients attended for the first time and 2,443 were re-attendances.

DEPARTMENT OF RADIOGRAPHY.—During the period of report 872 X-ray photographs were made in the investigation of 415 patients; these examinations included:—

20 Opaque meals. 8 examinations of lungs and hearts.

6 Pyelograms. 10 dental examinations.

6 Cholecystograms. 3 examinations of the fœtus in utero.

In the matter of examinations in this department the record set up last year has this year been equalled. No fee for examination is made to the families of workmen who are regular subscribers to the funds of the Hospital. The X-ray apparatus is still an up-to-date machine and is giving much appreciated service.

PHYSIO-THERAPY DEPARTMENT.—This department continues to be a very useful adjunct to the Orthopædic work; the results of the fracture clinic continue to be very satisfactory. The use of gas and oxygen anæsthesia for the reduction of fractures is routine—it is a convenient anæsthetic with little after-effect, and by its use suffering is avoided and more accurate reduction made possible. The use of plaster of Paris splints and of Kirschner's extension apparatus has been specially valuable. Towards the end of the year the purchase of a modern extension and plaster table has been made possible by the services of the

Special Appeals' Committee; without this apparatus no fracture clinic is complete and its use has been and will be of inestimable value in the treatment of these cases.

The massage department has been under the care of Miss Joan Simon who continues to give excellent service to the department. After-treatment was given to 144 patients; in all 1,221 treatments were given which included 273 electrical treatments. The following summary illustrates the good results of the treatment:—

Full anatomical and functional result	59
Good functional result	
Condition improved	2 I
Condition unchanged	
Still undergoing treatment	

THROAT, NOSE & EAR DEPARTMENT.—166 operations were performed. The number of operations for the removal of tonsils and adenoids for which the Board receive payment from the Education Department was 128.

DEPARTMENT OF ANÆSTHETICS.—The up-to-date gas and oxygen anæsthesia apparatus continues to be of inestimable value and its use is fast becoming routine in the anæsthetising of adult patients for major operations. With it the after-effects and the dangers of anæsthesia have been reduced to a minimum. The following is detailed analysis of the anæsthetics used in the 709 cases:—

OPEN ADMINISTRATION:—	
Chloroform	213
Æther	
Chloroform and Æther mixture	62
By BOYLE'S APPARATUS:—	
Gas	41
Gas and oxygen	146
Gas oxygen and æther	87
Oxygen and æther	
SPINAL:—	
Intrathecal injection	9
LOCAL ANÆSTHESIA	10

ANTE-NATAL DEPARTMENT.—553 examinations were made in this department; 184 being new patients attending for consultation, while subsequent attendances numbered 369. It is to be regretted that more patients do not avail themselves of this aid to safer maternity.

TOTAL NUMBER OF OPERATIONS DURING 1935...926 (191 were major and 735 minor).

TRAINING OF NURSES.—Five courses of lectures have again been given and the Hospital examinations held. It is most gratifying that this year again all our nurses presented for the State Preliminary examination have been successful—these have all proceeded to the Bradford Royal Infirmary, with which this Hospital is affiliated, to complete their training. At meetings of the Board the Chairman, in a few well chosen remarks, presented the certificates to the successful candidates. Although the Hospital has been approved by the Central Midwives' Board for the training of pupil midwives the Board has found itself unable to undertake this work.

STAFF RECREATION.—A nine-hole golf course, a hard tennis court and table tennis supply much appreciated recreation for the staff. The motor lawn-mower continues to give satisfactory service and the lawns are improving each year.

ENGINEERING.—The boiler inspector's report on the boiler was again satisfactory, but the boiler is fast approaching an age when troubles may be expected; the electrical plant has given good service, and continues to meet the need of the Hospital; the X-ray apparatus continues to work in a satisfactory manner and its help is much appreciated; the engine, laundry machinery and sterilizing plants have worked efficiently. Unfortunately the wireless installation gives very poor reception and is in need of overhaul or renewal; a patient has presented the nursing staff with a portable set for their own use.

THE GROUNDS.—The lawns, flower beds and shrubberies add much to the amenity of the grounds and the concrete-edging of the vegetable garden has been a great improvement. All the available ground has been under cultivation and has given good crops which have saved the Board a very considerable expenditure.

ACKNOWLEDGMENTS.—The Special Appeals' Committee has put in good work and raised considerable sums for the Hospital. We are indebted to them and to the Hospital Auxiliary Committee for their services. Almost all sections of the workmen in the district are now contributing regularly through the Auxiliary Committee. The workmen have given willingly, and, whilst their help is very useful, it is a very gratifying token of their appreciation of the work of the Hospital.

It is my pleasing duty to acknowledge the hearty co-operation of, and the loyal support I have enjoyed from, all the General Medical Practitions of the area. My especial thanks are due to my colleague, Dr. Ewen, for his services to the Hospital and to me personally.

The Hospital is served by an excellent Matron, and I take this opportunity of expressing my appreciation of her valued help, and of the services of the Nursing Staff, and also of the services of the Domestic Staff and Out-door Staff; all have given of their best in the interests of the Hospital.

The members of the local Nursing Division of the St. John Ambulance Brigade, under Lady Divisional Superintendent Mrs. Ayton, have, in turn, taken ward duty in the Surgical Wards—the experience has been valuable to them and the Hospital is grateful for their services as also for the work of the Orderly in the male wards who has given his services under the Social Service Scheme.

Finally, I have the pleasant duty of tendering my thanks to the Chairman, Secretary and Members of the Board for their sympathy, courtesy and help at all times.

31st December, 1935.

Annual Report of Matron.

NURSING STAFF.—The number of the Nursing Staff remains as last year. There have been several changes, including Miss S. E. Hodgson, Sister and Deputy Matron, who resigned her appointment at the end of the year. Two probationers have gone to the Royal Infirmary, Bradford, for further training.

DOMESTIC STAFF.—The number remains the same but there have been several changes.

LAUNDRY.—This continues to work satisfactorily.

HOUSEKEEPING.—The average number of persons fed during the year per day was 60.6. The cost of feeding per head per day was 1/1\frac{1}{4}. About 6,500 eggs were put into pickle and jam and marmalade made to last nearly the year. During egg week the number of eggs collected reached 7,672.

EQUIPMENT AND RENEWALS.—Replacements of clothing, bedding and crockery have been made and all the equipment is in good condition.

THE LINEN LEAGUE has been very active and with the proceeds of Bridge Drives, the sale of marmalade by Mrs. Waite and various other activities raised a total of £21 18s. 6d. during the year. Most of this has been spent on sewing materials and the Linen League has also bought a hand sewing machine.

FRIGIDAIRE.--This continues to work satisfactorily.

THE SPECIAL APPEALS COMMITTEE continues to be exceedingly helpful.

I have to acknowledge with great pleasure the help I have received from the Staff of the Hospital and from all the many friends who support the Hospital so well.

A. COMPTON, Matron.

31st December, 1935.
